

Documentation project software

First page(Home page)

We add photo discuss the project idea (wedding system)

Second page (login Page)

We take username and password from user

We used panel to discuss login information we just ask the user to enter their first name and las name.

Third page(changing information)

User id : we have made user id in the database so we ask user to enter user id and delete it if they want

User registration : we are just identifying the user registration and select their number from the drop box

Delete part

User id : to select user id

Old password

New password

(we ask user to change his old and new password)

Fourth page Sign up

First name

Last name

Age

Username

Password confirmation password

We ask user to sign up with their data and it's connected to database.

Fifth page

We used 3 functions count and maximum and minimum

We are just using age from the database table to calculate these function.
